Digital Commons@Georgia Southern is an open-access institutional repository managed and provided by the Zach S. Henderson Library. Its purpose is to archive and disseminate the intellectual and creative output of the University’s faculty, administration, staff and students. Contributions come from all over campus and include faculty publications and presentations, datasets, theses/dissertations, university policies, newsletters/magazines, videos and photographs. Since its launch in Fall 2013, materials in Digital Commons have been downloaded more than 1 million times from around the world.
Digital Commons@Georgia Southern

A SERVICE OF THE ZACH S. HENDERSON LIBRARY AT GEORGIA SOUTHERN UNIVERSITY

PROFILES & METRICS

SelectedWorks profiles compile faculty information, scholarship and creative activity into one place with options to upload materials or link to sites that contain their work. The library offers to create SelectedWorks profiles for faculty. This service includes inputting works within the last five years and researching copyright to determine what full text can be uploaded. To request a site, email your CV, research interests and photo to: digitalcommons@georgiasouthern.edu.

With a SelectedWorks profile, faculty are automatically featured in Faculty Publication Series, PlumX Metrics and Expertise Search.

Faculty Publication Series compile scholarly publications attributed to Georgia Southern faculty for departments, colleges, etc.

PlumX Metrics lists metrics (usage, captures, mentions, social media, and citations) for faculty scholarship and creative activity. Individual metrics are provided for faculty, and collective metrics are provided for departments and colleges.

Expertise Search is a searchable gateway to find Georgia Southern faculty by research interests. The Expertise Search is a great tool for collaboration and recruitment.

Plum X Metrics and Expertise Search are sponsored by the Office of Research and Economic Development.

JOURNALS & CONFERENCES

Journal and conference sites in Digital Commons have a built-in peer-review system from submission to decision. Each site’s design and content are customizable to suit any organization’s needs. Digital Commons also provides maps and statistics to demonstrate your journal’s or conference’s outreach.

DATA CURATION

Many funding agencies and publishers now require that research data be made publicly available. Sharing data is beneficial as it increases visibility and opportunities for collaboration. Digital Commons can fulfill this requirement. The library can also help you explore other curation options as you prepare research and grant proposals.
