Part of the History Commons, and the Music Commons

This catalog (open access) is brought to you for free and open access by the Gretsch Family in the Musical Instrument Universe as Presented by Georgia Southern University at Digital Commons@Georgia Southern. It has been accepted for inclusion in Gretsch Company Catalogs and Price Lists by an authorized administrator of Digital Commons@Georgia Southern. For more information, please contact digitalcommons@georgiasouthern.edu.
Since 1883, Gretsch has manufactured drums with clean, distortion-free tones. Snares, toms, and bass drums, in all sizes and models produce the clear, sharp sound which has made us famous.

But Gretsch knows that it is not enough to produce the best quality drums on today's market. That's why we have been innovators, designing features that will lead the field tomorrow. Gretsch was first with the patented snap-in key and holder. We introduced diecast hoops, uni-body brass snare shells and internal support spurs.

In fact, Gretsch has originated improvements on virtually every model that have become standards for our industry. The combination of our traditional resonant sound and our modern technical advancements have won us friends far and wide. So the Gretsch name is now recognized all over the world as a symbol of quality.

Every Gretsch drum shell is a smooth, unmarred cylinder produced by Gretsch craftsmen using the finest materials available. The workmanship must be perfect to prevent dead spots and guarantee the unmatched Gretsch tonal projection.

All wood shells utilize a six-ply construction that provides the strength and shape stability to assure true sound. Snare shells begin with a special design Brass blank. Die cast, fully flanged hoops and self-aligning tensioning further enhance the fullest possible response from the instrument. And a silver lacquer application on the inside of the shells protects the Gretsch sound, regardless of the humidity or weather conditions. The attention to detail even extends to Gretsch drum hardware. The superior craftsmanship of all Gretsch products provide stable quality, no matter which Gretsch products a percussionist chooses.

We are pleased to present this drum parts catalog. The clear illustrations and logical numbering system have been designed for rapid reference and easy ordering. Our parts department will be delighted to respond promptly to your needs.

24. Flat Washer
25. Mounting Screw
26. Spring
Bass Drum Hoops

Die Cast Drum Hoops

Gretsch was the first drum manufacturer to produce die-cast hoops, and the first to offer them as standard equipment. Die-cast hoops are truer round, which enables them to be tuned accurately with a consistent tension over the entire batter head.

Because Gretsch hoops are solid die-cast, they will not twist or warp. These hoops are fully flanged and beaded for the crispest, cleanest rimshots. And like all metal parts on Gretsch drums, the hoops are chrome plated and highly polished. Another of the features that are essential to percussionists who rely on that great Gretsch sound!
