GNETS FBA/BIP Process

Jessica Schuster – Behavior Specialist – North Metro GNETS
Jessica.schuster@mresa.org

GAPBS Conference – December 3 – 4, 2014
FBA/BIP Expectations

- All students will be expected to have a new FBA and new BIP written before their IEP date.
  - Take 10 days of ABC (Antecedent-Behavior-Consequence) data to get accurate and rich data to base your Behavior Intervention Plan from.

- BIPS will be written with *Function Based Interventions*
  - Functions of behavior: Attention, Escape, Automatic, Tangible
  - Power/Control is NOT a research based function.

- BIPS will be monitored closely
  - During bi-weekly team meetings
  - BIP Fidelity Checks (template later in presentation)
FBA/BIP Timeline (Sample)

Begin Taking ABC Data
- September 15

Analyze data and write FBA
- September 29

Write BIP
- September 30

IEP & BIP sent home for review
- October 1

IEP Meeting
- October 15
Outline – FBA Data Collection

Direct Data

• ABC Data
• Anecdotal Evidence

Indirect Data

• FAST

ABC Data Collection Methods:

  - Behaviordoc.org
    ▪ Example
  - Riffel
    ▪ Example
BehaviorDoc.org

**TABLE OF CONTENTS**

- **Step 1**: Enter information about the student
  - Demographics
  - Date & Time

- **Step 2**: Select criteria for reporting on behaviors
  - Choose Criteria

- **Step 3**: Print paper data collection forms and begin Data Collection.
  - Paper Form

- **Step 4**: Go to Calendar and Enter Data
  - Calendar

- **Step 5**: After entering ten days of data, print report.
  - Report
### Customize Criteria for Student

#### Instructions:
Change or enter new criteria by typing directly in light blue areas.

Input data from paper form into BehaviorDoc spreadsheet
Results:

The purpose of this assessment is to determine the function of 3 target behaviors: Defiant Behavior/Refusal, Removing Clothes, Aggression. It was observed over a period of 10 school days. School was in session from 8:00 until 3:30.

Each bar in the graph below represents the number of behaviors observed in each 30 minute time segment during this assessment.

Most Active Times of Day:

**Context (setting)/Behavior Interaction:**
Antecedent is the trigger, the event that started the behavioral incident.

Consequence describes what happened as the result of a behavior.
Outline – FBA Analysis

- FBA Templates:
  - Functional Behavior Assessment Template
    - Example
    - Cheat Sheet
**FAST (Indirect Data)**

**Functional Analysis Screening Tool**

Client: 
Date: 

Interviewer: 

**Instructions:** The FAST (Indirect Data) is a tool designed to screen for environmental factors that may influence problem behaviors. It should be used only for screening purposes as part of a comprehensive functional analysis of the behavior. Complete the FAST only if the client is not currently exhibiting the behavior being assessed.

**To the Interviewer:** The FAST identifies environmental and physical factors that may influence problem behaviors. It should be used only for screening purposes as part of a comprehensive functional analysis of the behavior. Administer the FAST to several individuals who interact with the client frequently. Thus, one may use the results as a guide for conducting a series of direct observations and to identify other factors that may influence the problem behavior.

**To the Client:** Complete the sections below. Read each question carefully and answer by checking “Yes” or “No.” If you are uncertain about an answer, circle “N/A.”

1. **Client-Interviewer Relationship:**
   1. Are you comfortable to talk to this person? [Client] [Paraprofessional] [Parent] [Instructor]
   2. How long have you known the clients? [Years]
   3. Do you interact with the client daily? [Yes] [No]
   4. In what situations do you usually interact with the client? [Examples: Academic, Social, Leisure, Work, or residential settings]

2. **Problem Behavior Information:**
   1. Describe the behavior (check and describe):
      - Aggression (Fighting, Bullying, Physical assault)
      - Stereotypy (Self-stimulating behaviors)
      - Property destruction (Vandalism, Theft, Damage)
      - Disruptive behavior (Annoying, Disturbing)

3. **Frequency:**
   - Hourly
   - Daily
   - Weekly

4. **Severity:**
   - Mild: disruptive but little risk to property or health
   - Moderate: property damage or minor injury
   - Severe: significant threat to health or safety

5. **Scoring Summary:**
   - Click the number from above for each question answered “Yes.”
   - Total:
     - Attention/Reinforcement
     - Escape/Social
     - Sensory Stimulation (Aid)
     - Pain attenuation

6. **Comments:**

</table>

When the student ___
- to get/to avoid ___
- staff/peers must/frequently respond by ___

Through this behavior, the student is trying to communicate ___

Additional Notes (if needed):
Analyze ABC Data using FBA Template

Functional-Behavioral Assessment - EXAMPLE

Student's Name: [Name]
Student's DOB: [DOB]
School Name: [School Name]
Date of FBA: [Date]

Data Sources:
Direct Observation
Indirect Observation

Student Interview
Teacher Interview
Parent Interview
Rating Scales
Brief Student Background

Strengths: [List strengths]

Brief Educational History:

Description of Target Behavior, Choose 1 or 2: (operationally defined, easily observable and measurable, include examples and consequences)

Behavior: [Behavior]
Examples: [Examples]

Frequency (how often does behavior occur - according to data collected):
Between 2-3 times per day:
Between 5 and 10 minutes per episode:

Day/Time: (is the behavior more likely to occur on certain days or times?)

The behaviors most frequently occur at 8:30am and 10am on Mondays and Wednesdays.

Intensity: (Consequences of problem behavior: on-student, peers, instructional environment; rate the intensity of the behavior on a three-point scale - low intensity, medium intensity, high intensity)

This behavior is a high intensity behavior due to the level of disruptiveness that it causes. At times, the student's behavior becomes so disruptive that either the student's peers need to be removed from the classroom or the teacher removes herself from the classroom (due to it being an attention-maintained behavior).

Setting Events (e.g., stressors; antecedent events that set the stage for a higher likelihood of target behavior):

- The behavior appears to occur more frequently in language arts and during writing activities in other classes.
- The student has a new baby sister, and he has been absent several days since her birth.

Antecedent Events (Immediate triggers): Identify what happens immediately before the target behavior occurs:

- The direct observation data suggested that the behavior most frequently occurs in response to a teacher instruction or directive.

Through a discussion with the classroom teacher, it was determined that the behavior may occur most frequently in response to teacher attention to other students or to another task.

Identify events or times or situations when the target behavior does not usually occur:

- The behavior is least likely to occur when the student’s teacher is providing the student with one-on-one attention.

Consequences (i.e., how others respond immediately after the problem behavior occurs):

- According to the data collected, the student’s teachers most often respond to the behavior by redirecting the student back to task or by teaching the student a replacement behavior.

What was the most common student reaction to consequences implemented for the target behavior (does it continue/intensity/stop):

- According to data collected, the student typically stops when given adult redirection.

Hypothesis (includes antecedent events, behavior, consequence, function, and what the student is trying to communicate through the behavior):

- When [Condition]...the student [Response]
- the student must frequently respond [Condition]...the student's behavior [Result].

Through this behavior, the student is trying to communicate [Function].

When the student is not receiving one-on-one adult attention, most often in the morning and during writing tasks, and when given an instruction/directive, the student engages in physical movement defined by moving...
Analyze ABC Data using FBA Template

Functional-Behavioral Assessment --- CHEAT SHEET

Use Direct (ABC-data/anecdotal-data) and Indirect (FAST, MAS, PBQ-QABE) Data to fill this assessment out.

Student's Name: [Insert Student Name]
Student's DOB: [Insert Date of Birth]
Date: [Insert Date]

Data Sources:
- Direct (Behavioral观察)
- Indirect (Teacher Interview, Parent Interview, Rating Scales)

Brief Student Background:

Strengths:

Description of Target Behavior, Choose 1 or 2 (operationally-defined, easily observable and measurable, include examples and consequences):

Your Target Behavior should be the INTERFERING Behavior. You have taken 10 days of data on this behavior previously using Direct Data (ABC Data).

Frequency (how often does behavior occur according to date collected):

Find this on ABC Data Tool from Behavior Doc or in Catalyst.

Duration (length of time each episode lasts according to date collected):

The average duration of the behavior can be determined by reviewing the data collection sheets or through team discussion.

Day/Time (is the behavior more likely to occur on certain days or times):

Can find this on ABC Data Tool from Behavior Doc or in Catalyst.

Function of behavior:

Intensity (Consequences of problem behavior on student, peers, instructional environment; rate the intensity of behavior on a three point scale: low intensity, medium intensity, high intensity):

The average intensity can be determined by reviewing Catalyst or through team discussion.

Additional Notes (if needed):
Template says: “Antecedent Events (Immediate triggers) Identify what happens immediately before the target behavior occurs:”

Example says: “The direct observation data suggested that the behavior most frequently occurs in response to a teacher instruction or directive. Through a discussion with the classroom teacher, it was determined that the behavior may occur most frequently in response to teacher attention to other students or to another task.”

Cheat Sheet says: “Antecedent events can be identified on the ABC Data Tool or Catalyst”
Outline – Behavior Intervention Plan

</tbody>
</table>

**Description of Target Behavior:** (operationally defined, easily observable and measurable, includes examples and consequences)
- Copy exactly from FBA Template "Description of Target Behavior".

**Hypothesis:** (developed based on information gathered during the FBA)
- Copy exactly from FBA Template "Hypothesis".

**Antecedent Modifications:** (what can be done to prevent the occurrence of fast triggers)
- Describe in enough detail for them to be implemented.
  - Look at “Day/Time,” “Setting Events,” “Antecedent Events” from FBA Template.
  - Also, see “Function Based Interventions Matrix.”

**Replacement Behaviors:** (what new behavior will be taught or what current behavior will be increased that serves the same function as the behavior targeted for reduction and allow the student to achieve the same outcome)
- How will the replacement behavior be taught to the student?
  - This should be a NEW or shaped behavior that has the same outcome for the student. For example, if the student escapes by eloping, he/she should be taught instead to ask for a break.
  - The replacement behavior should make it easier to access the function (escape, attention, tangible, sensory) than the Target Behavior (the interfering behavior).
  - See “Function Based Interventions Matrix.”

**Strategies for Reinforcing Replacement Behavior:** (what is the immediate benefit to the student? How will the student be rewarded for engaging in the new or emerging behavior in a way that addresses the function of the behavior?)
- How will you make it more rewarding for the student to access the function of behavior easier than exhibiting the Target Behavior? Be specific.

**Strategies for Reducing the Target Behavior:** (what will the response be should the target behavior occur? This response should not maintain the behavior)
- Traditionally, this has been called “Consequences.” However, the word consequence has a negative connotation and is often mistaken for “Punishment.”
  - Instead, this is how staff will react when the Target Behavior occurs.
  - This response should not maintain the behavior. In other words, if the function of behavior is attention, staff response should NOT be to verbally redirect, or give one on one, as it would maintain the behavior.
  - Another example is: if the function of the behavior is escape, then staff response should not be to call parents to come get the child, as it would maintain the behavior.
  - See “Function Based Interventions Matrix.”

**Crisis Plan:** (should the strategies for reducing the target behavior not be effective or if the target behavior occurs in a manner that jeopardizes the safety of the student or others, how would others respond)
- Describe in enough detail such that the procedures could be implemented by anyone who reads the crisis plan.
- Check with your district. This may include a mindset, but more often it will include things like:
  - How long will staff let behavior go on before intervening?
  - When does staff need to remove other students from area?
  - When does the SRO need to be called?
  - When does the parent need to be called?
  - When does administration need to be involved?

**Data Collection and Monitoring:** (what type of data will be collected, when, and by whom)
- Once the data are collected, how often will the data be monitored and by whom? Based on the data, how often will updates be made to the BIP?
- Be specific.

**Staff Training and Monitoring:** (who is responsible for training others to implement this BIP? What is the process for training others to implement this plan? How often will staff be observed to ensure they are implementing this plan as written? [fidelity of implementation]? When will this plan be reviewed again?)
- Be specific.
Template: "Replacement Behaviors (What new behavior will be taught or what current behavior will be increased that serves the same function as the behavior targeted for reduction and allow the student to achieve the same outcome) How will the replacement behavior be taught to the student?:"

Example: "The student will be taught to wait for his teacher’s attention. Additional baseline data will be taken to determine how long the student can work independently without requesting his teacher’s attention. After a baseline is established (e.g., the student can work an average of 3 minutes without requesting his teacher’s attention), the student will be taught to gradually build upon that amount of time by doing the following: refer to a folder of appropriate “waiting” activities such as brief easy-to-complete academic tasks, word-finds, drawing activities, etc.

- The student should be taught how to engage in these appropriate “waiting” tasks by the teacher and the paraprofessional. The student should be taught using direct instruction and role play. During the teaching process, he should be expected to demonstrate that he knows the difference between “waiting” and “not waiting” before the plan is implemented in context.

- The student should be taught how to self-monitor his “waiting” behavior. He should be placed in view of a clock and at the beginning of every day (during the check-in walk), he should be informed of how long he will be expected to wait prior to requesting his teacher’s attention. In addition, he should have a self-monitoring form on his desk that divides the day according to the segments of “waiting.” The form should be set-up in a way allows the student to mark if he has or has not waited the expected amount of time. Before the intervention is implemented, he should demonstrate competency in being able to use a clock.

Cheat Sheet: "This should be a NEW or shaped behavior that has the same outcome for the student. For example, if the student escapes by eloping, he should be taught instead to ask for a break.

- The Replacement Behavior should make it easier to access the function (escape, attention, tangible, sensory) than the Target Behavior (the interfering behavior)

Use of Fidelity Reports

- Copies given to the Lead Teachers and Site Coordinators after visit
- Copies given to the teacher after visit
- If “goals” recorded, a follow up visit by Behavior Specialist, Lead Teacher, or Site Coordinator is necessary to check on progress of goal
- Additional Notes or Comments at bottom – these are not goals, but they are things for the teacher to start thinking about for the next FBA or BIP they write
BIP Availability in Classroom

- BIPs for every student that you teach should be kept in your classroom
  - Even if the student is not on your caseload (i.e. not in your homeroom), if you have that student in your classroom during an academic period – you must have a copy of their BIP

- Please put all BIPS into one binder, readily available for reference for walkthroughs.
Special Thanks

- Thanks to Georgia State – Center for Leadership in Disability for partnering with GNETS to create better and more data driven Functional Behavior Assessments and Behavior Intervention Plans for our students.
