PUBH 7090-A – Selected Topics in Public Health:  
Advanced Infectious Disease Epidemiology (3 credits)  
Spring 2015

DRAFT SYLLABUS: UPDATED as of February 11, 2015. Subject to further changes.

Disclaimer: Class schedule and module contents may be subject to changes during the semester. Students should attend classes and pay attention to any announcements given by the instructor.

**Prerequisites:**  
EPID 7135 Epidemiology of Infectious Disease or equivalent or permission from the instructor.

**(Proposed) Catalog Description:**  
This course covers the use of mathematical and computational approaches to study infectious diseases. We will discuss models that address both the dynamics of infectious disease spread through populations and the dynamics of pathogens inside an infected individual. Students will learn how to build and analyze models for a variety of human and animal diseases. We will look at the impact of interventions on disease outcomes. Students will learn how to interpret results of modeling studies to make informed public health policy decisions.

**Required Textbook:**  

**Required Software / Programming Language:**  
The R software is freely available at [http://cran.r-project.org/](http://cran.r-project.org/) (for Windows, Mac or Linux).

**R Studio** is a free and open source integrated development environment for R. It is freely available at [http://www.rstudio.com/](http://www.rstudio.com/).
JPHCOPH MPH Program Core Student Learning Outcomes:

At the completion of this program the student will be able to:

1. Demonstrate proficiency and effectiveness in the communication of core public health principles and practices, both oral and written.
2. Demonstrate proficiency in the integration of the core public health disciplines (Biostatistics, Epidemiology, Environmental Health, Health Policy/Management, and Social/Behavioral Science) in practice and research.
3. Demonstrate proficiency in problem solving, critical thinking, and public health leadership.

Epidemiology Concentration Student Learning Outcomes:

At the completion of this program the student will be able to:

1. Formulate population-based hypotheses and develop appropriate research designs to test these hypotheses.
2. Collect, analyze, and interpret data derived from population-based research.
3. Create and implement public health surveillance systems for population-based studies.
4. Recommend evidence-based interventions and control measures in response to epidemiologic findings.
5. Communicate epidemiologic principles and concepts to lay and professional audiences through both oral and written communication.

Course Learning Objectives:

At the completion of this course the student will be able to:

1. Understand the methods and approaches to building mathematical models of infectious diseases (Core activity #1) – Core 3; EPID 1,2
2. Understand how to interpret the results and limitations of mathematical modeling studies (Core activity #2) – Core 3; EPID 3
3. Identify research questions that can be addressed with mathematical modeling methods and choose an appropriate model type for a particular question (Core activity #3) – Core 3; EPID 1
4. Interpret and critique mathematical models of infectious diseases published in the scientific literature (Core activity #4) – Core 3; EPID 3
5. Discuss the practical applications of mathematical modeling, and the role of mathematical modeling in public health policy (Core activity #5) – Core 1,2; EPID 3,4,5

Instructional Methods:

Class meetings will be a combination of lecture and practicals. Homework assignments, participation in lectures and practicals, and a project constitute the basis of student evaluation. Students will be taught creating mathematical models in R and Excel.

Exam Schedule:

No examination will be given. In place of an examination, there will be a project.
Assignments:

Given the small size of the class, students work as one group.

**Comprehensive review of published mathematical models of an infectious disease (40% of Final Grade)**

Each group will be assigned a topic for a comprehensive review. Students are expected to systematically search for relevant papers, screen them and extract relevant information therein. The review should compare and contrast published mathematical models of infectious disease dynamics (either at the population level, or at the within-host level), in terms of their aims/objectives, their model strategies/structures and their parameter values.

**Course Objectives: 1-5.**

**Interview individuals on the use of mathematical models in public health (20% of Final Grade)**

The instructor will put the students in touch with 2 or 3 modelers who work in the field of public health. The student will interview them (via Skype or Google Hangout, for example) on their experiences of working as a modeler in public health. If the interviewee consents, the students can record the interview.

The goal of this exercise is to provide the students with better ideas of the real-use of models in public health, as well as the human experiences of working as a modeler in public health. This will also serve as a networking opportunity for the students.

**Course Objectives: 5.**

**Practicals and Modeling mini-project (30% of Final Grade)**

In-class practicals are created to enhance the understanding of the materials delivered in the lectures, and to provide opportunities to practise programming in R. Eventually, students will be able to create a simple model of their own (mini-project) for a given infectious disease and program it in R. The deliverable will be the R code and a written report.

**Course Objectives: 1-5.**

**Final Powerpoint presentation (10% of Final Grade)**

Students are expected to give a powerpoint presentation of around 30 minutes.

**Course Objectives: 1-5.**
Grading:

Weighting of assignments for purposes of grading will be as follows:

- Comprehensive review of models: 40%
- Interviews of modelers: 20%
- Practicals and Modeling mini-project: 30%
- Powerpoint presentation: 10%

The following point scale will be utilized in grading:

- A: 90-100%
- B: 80% - 89.9%
- C: 70% - 79.9%
- D: 60% - 69.9%
- F: < 60.0%

All assignments will be graded and returned promptly so that students may accurately calculate their grades at any point in time during the semester.

Due time:

Electronic copies of assignments are due at 2pm on the due date (normally Thursday). Paper copies of assignments are due to be submitted in person to the instructor at 2pm (in class).

Late submission:

Reduction of 5% for every 24 hours. For example, for an assignment that is due on Thursday at noon, if someone submits it on the coming Saturday at 11.59am, then:

Final Grade = Grade * 90%

There are times when extraordinary circumstances occur (e.g., serious illness, death in the family, etc.). In such circumstances, please consult with the instructor within a reasonable amount of time. The instructor will consult the college administrators and verify the reported circumstances before any exemptions or extensions can be granted.

Nota Bene: Extensions are not guaranteed and will be granted solely at the discretion of the instructor.

Extra credit:

Students may earn extra credit by attending the Disease Dynamics Seminars that are held outside class time (1% of the Final Grade per seminar). Students who are unable to attend the seminars
may submit a brief summary of the speaker’s designated paper (or powerpoint; according to the specific instructions given by the instructor) in lieu of attendance and earn the extra credit.

For details about the Disease Dynamics Seminars, please visit: https://sites.google.com/a/georgiasouthern.edu/fung/disease-dynamics-seminars

**Academic Misconduct:**

As a student registered at this University, it is expected that you will adhere to only the strictest standards of conduct. It is recommended that you review the latest edition of the *Student Conduct Code* book, as well as the latest *Undergraduate & Graduate Catalog* to familiarize yourself with the University’s policies in this regard. Your continued enrollment in this course is an implied contract between you and the instructor on this issue; from this point forward, it is assumed that you will conduct yourself appropriately.

Academic integrity relates to the appropriate use of intellectual property. The syllabus, lecture notes, and all materials presented and/or distributed during this course are protected by copyright law. Students are authorized to take notes in class, but that authorization extends only to making one set of notes for personal (and no other) use. As such, students are not authorized to sell, license, commercially publish, distribute, transmit, display, or record notes in or from class without the express written permission of the instructor.

**Plagiarism:**

According to the Academic Dishonesty Policy of GSU, plagiarism includes but is not limited to:

A. Directly quoting the words of others without using quotation marks or indented format to identify them.
B. Using published or unpublished sources of information without identifying them.
C. Paraphrasing material or ideas without identifying the source.
D. Unacknowledged use of materials prepared by another person or agency engaged in the selling of term papers or other academic material.

If you are accused of plagiarism, the following policy per the Judicial Affairs website (http://students.georgiasouthern.edu/judicial/faculty.htm) will be enforced:

**PROCEDURES FOR ADJUDICATING ACADEMIC DISHONESTY CASES**

First Offense - In Violation Plea

1. If the professor and the Dean of Students agree that the evidence is sufficient to warrant a charge of academic dishonesty, the professor should contact the Office of Judicial Affairs to determine if this is a first violation of academic dishonesty. The incident will be reported via the following website: http://students.georgiasouthern.edu/judicial/faculty.htm
2. If it is a first violation, the professor should talk with the student about the violation. If the student accepts responsibility in writing and the professor decides to adjudicate the case, the following procedures will be followed:
   a. The student will be placed on disciplinary probation for a minimum of one semester by the Office of Judicial Affairs.
   b. The student will be subject to any academic sanctions imposed by the professor (from receiving a 0 on the assignment to receiving a failing grade in the class).
   c. A copy of all the material involved in the case (Academic Dishonesty Report Form and the Request For Instructor to Adjudicate Form) and a brief statement from the professor concerning the facts of the case and the course syllabus should be mailed to the Office of Judicial Affairs for inclusion in the student’s discipline record.

First Offense - Not In Violation Plea (student does not admit the violation)
1. If the professor and the Dean of Students agree that the evidence is sufficient to warrant a charge of academic dishonesty, the professor should contact the Office of Judicial Affairs to determine if this is the first or second violation of academic dishonesty. The student will be charged with academic dishonesty and the University Judicial Board or a University Hearing Officer would hear the case. If the student is found responsible, the following penalty will normally be imposed:
   a. The student will be placed on Disciplinary Probation for a minimum of one semester by the Office of Judicial Affairs.
   b. The student will be subject to any academic sanctions imposed by the professor.

Second Violation of Academic Dishonesty

1. If the professor and the Dean of Students agree that the evidence is sufficient to warrant a charge of academic dishonesty, and if it is determined this is the second violation, the student will be charged with academic dishonesty and the University Judicial Board or a University Hearing Officer would hear the case.
2. If the student is found responsible, the following penalty will normally be imposed:
   a. Suspension for a minimum of one semester or expulsion.
   b. The student will be subject to any academic sanctions imposed by the professor.

NOT RESPONSIBLE FINDING

When a student is found not responsible of academic dishonesty, the work in question (assignment, paper, test, etc.) would be forwarded to the Department Chair. It is the responsibility of the Department Chair to ensure that the work is evaluated by a faculty member other than the individual who brought the charge and, if necessary, submit a final grade to the Registrar. For the protection of the faculty member and the student, the work in question should not be referred back to the faculty member who charged the student with academic dishonesty.

In the case of a Department Chair bringing charges against a student, an administrator at the Dean’s level will ensure that the student’s work is evaluated in an appropriate manner.

**Academic Handbook:**

Students are expected to abide by the Academic Handbook, located at [http://students.georgiasouthern.edu/sta/guide/](http://students.georgiasouthern.edu/sta/guide/). Your failure to comply with any part of this Handbook may be a violation and thus, you may receive an F in the course and/or be referred for disciplinary action.

**University Calendar for the Semester:**

The University Calendar is located with the semester schedule, and can be found at: [http://www.georgiasouthern.edu/current.php](http://www.georgiasouthern.edu/current.php).

**Attendance Policy:**

Federal regulations require attendance be verified prior to distribution of financial aid allotments. Regular attendance is expected and will be recorded. *Failure to attend class will negatively impact your participation grade.*

**Portfolio Inclusion:**

Samples of your work may be reproduced for research purposes and/or inclusion in the professor’s teaching portfolio. You have the right to review anything selected for use, and subsequently ask for its removal.

**Retaining of Original Work:**
All original examinations, papers, etc. may be retained by the instructor for documentation and accreditation purposes. If you wish to obtain a copy of your graded work that has been retained, come by the instructor’s office and we will make a copy for your records.

**Expectation of hours of work outside class time:**

For this course, students are expected to spend **at least 6 hours per week** outside class time, to read their textbooks and other reading materials and to complete their assignments and other required tasks. Some students may need more time, depending on each student’s abilities and circumstances.

**Office hours:**

Students are **highly recommended to make an appointment** with the instructor, even if they plan to meet him during office hours. The instructor may be meeting another student when you arrive at his office. Making appointments allow you to have priority over any students who do not make an appointment. This also allows the efficient use of your time and the instructor’s time.

**One Final Note:**

The contents of this syllabus are as complete and accurate as possible. The instructor reserves the right to make any changes necessary to the syllabus and course material. The instructor will announce any such changes in class. It is the responsibility of the student to know what changes have been made in order to successfully complete the requirements of the course.
## DRAFT: Proposed Class Schedule (accurate as of February 11, 2015)

(Subject to potential adjustments during the semester)
