Syllabus: BIOS 9132 – Advanced Clinical Trial Methodology
Jiann-Ping Hsu College of Public Health
Georgia Southern University
Hendricks Hall, PO Box 8015
Statesboro, GA 30460
Fall Term, 2017

Instructor: Karl E. Peace
Office: 1005 Hendricks Hall
Phone: 912-478-7905
E-Mail Address: kepeace@georgiasouthern.edu
peacekarl@frontier.com
Office Hours: Wednesday – 3:00 PM – 5:00 PM
Other times by appointment:
Students are encouraged to make frequent use of email contact where each
question will be responded via return email
Class Meets: Wednesday – 5:00 AM-to-7:45 PM Fall Semester

Prerequisites: Clinical Trial Methodology or Statistical Issues in Drug Research and
Development, or by permission of instructor.

Catalog Description: Students are introduced to regulatory, scientific, statistical and
practical aspects of methods inherent in design, monitoring and
analyzing clinical trials. Clinical trials in many areas of drug
development are presented, discussed and critiqued.

Required Textbook: No textbook required – although the text: Peace, K. E., Chen, D
(2010): Clinical Trial Methodology; Chapman & Hall/CRC, Taylor and Francis
Group, will be very helpful. The course is presented using power points developed by
the professor. Students are provided copies of the power points on a flash drive.

Secondary Texts:

Peace, K. E., Chen, D (2010): Clinical Trial Methodology; Chapman & Hall/CRC, Taylor
and Francis Group.

Chen D, Peace KE (2010): Clinical Trial Data Analysis using R; Chapman & Hall/CRC,

Chen, D, Peace KE (2013): Applied Meta-Analysis using R. Chapman & Hall/CRC,

Time-to-Event Data: Methods and Applications"; Chapman & Hall/CRC, Taylor and
Francis Group; Published July, 2012.

**Biostatistics Student Learning Outcomes (BSLO):**

**Cross-cutting**
1. Demonstrate their readiness to work with communities to address public health problems.
2. Select and apply theoretically based interventions to address public health problems.
3. Apply appropriate research methods to address community health problems, particularly among rural and underserved populations.

**Biostatistics Concentration**
1. Construct a public health and biomedical research question from ideas, conditions, and events that exist in a rural and urban community, region, state, and nation using critical thinking skills.
2. Demonstrate required skills for translating public health practice objectives to the appropriate biostatistical framework for analysis and interpretation of results.
3. Illustrate sufficient substantive knowledge of advanced biostatistical methods such as multiple regression, logistic regression, survival analysis, longitudinal data analysis, and Bayesian and adaptive methods to interact with biostatisticians and related public health researchers in a meaningful and productive fashion.
4. Communicate biostatistical principles and concepts to lay and professional audiences through both oral and written communication.

**Course Objectives:** At the end of this course, students should be able to:

1. Explain the requirements for good protocol development for biomedical research clinical trials and develop the statistical analysis section of such protocols (BSLO: 1,2,3,4)
2. Describe methodological alternatives to commonly used statistical methods used in biomedical research clinical trials when analysis assumptions are not met, and describe prerequisites for validity of inference from clinical trials (BSLO: 1,2,3,4)
3. Interpret results of statistical analyses of data collected from biomedical clinical trials (BSLO: 3,4)
4. Develop written and oral presentations based on statistical analyses of biomedical research clinical trials, for both biomedical research professionals and educated lay audiences (BSLO: 2,3,4)
5. Identify key federal regulations ‘governing’ the conduct of clinical trials (BSLO: 1,2,3)
6. Discuss the Ethics of Clinical Trial Research (BSLO: 1,3,4)
7. Describe the components of Population Nonlinear, Mixed Effects Modeling (BSLO: 2,3,4)
8. Design, analyze and interpret results of bioequivalence, cancer and non-inferiority clinical trials (BSLO: 1,2,3,4)
9. Describe the issues in group sequential clinical trials and in subset analyses (BSLO: 1,2,3,4)
10. Describe ‘intention to treat’ and its impact on inference when data are missing and methods of imputing missing data (BSLO: 1,2,3,4)

Advanced Clinical Trial Methodology Content to be Covered During the Semester:

Module I: An Overview of the Regulation of Pharmaceuticals
Module II: An Overview of the Processes of Discovery, Basic Research, Clinical Development and Manufacturing in Pharmaceutical Development
Module III: Ethics of Clinical Trial Research
Module IV: Overview of Biostatistical Aspects of Clinical Drug Development
   A. The Components of a Protocol
   B. Statistical Analysis Section of a Clinical Trial Protocol
   C. The Statistical Analysis Plan
Module V: Statistical Analysis Plan
Module VI: Validity of Statistical Inference
Module VII: Population Nonlinear, Mixed Effects Modeling of Primary Efficacy Endpoint in Enrichment Trials of Alzheimer’s disease
Module VIII: Biostatistical Aspects of the Design of Cancer Trials
Module IX: Biostatistical Aspects of the Analysis and Interpretation of Cancer Clinical Trials
Module X: Interim Analyses: p-Value and Power Computations in Group Sequential Trials
Module XI: Statistical Analysis of Dose Response Trials
Module XII: Safety Assessment in Clinical Trials
Module XIII: Subgroup Analyses in Clinical Trials from a Causal Inference Viewpoint
Module XIV: Statistical Paradigms and Methodologies for Clinical Development
Module XV: Biosimilarity
Module XVI: A Clinical Trial to Reduce CHD Risk
Module XVII: Intention-to-Treat and Inferential Impact of Missing Data
Module XVIII: Methods for Imputing Missing Data
Module XIX: Overview of Meta-Analyses
Module XX: Design and Analysis of Non-inferiority Clinical trials
Module XXI: Sample size of clinical trials premarket approval
Module XXII: Numbers Needed to Treat in Clinical trials

Instructional Methods: Class meetings will be a combination of lecture and class discussion. Approximately half of the class meetings will be facilitated via Adobe Connect or Cisco Webex in real time (blended format) and the remainder physically in the classroom. Homework assignments – including a research project that requires class presentation and the final
examination constitute the basis of student evaluation. Students are expected to make use of ample office hours to discuss concepts or difficulties they may have. Office hours may be individualized via using Adobe Connect or Cisco Webex or in professor’s office.

**Daily Study Log:** Students are required to keep a daily computerized study log. The study log should have a column for the date, a column to identify topic of study, a column to identify the time of beginning study, a column to identify the ending time of study, and a column to identify the amount of time spent in studying the topic. This allows students to provide greater input to the professor as to time spent studying during the semester.

**Grading:** Weighting of assignments for purposes of grading will be as follows:

- Final Exam (objectives 1-14, integrated)………………………………..60%
- Homework & Research Project Assignments (objectives 1-14, individually)…..30%
- Class Participation (objectives 1-14, individually)…………………………10%

Total Possible 100%

The following point scale will be utilized in grading:

- 90% - 100% A
- 80% - 90% B
- 70% - 80% C
- 60% - 70% D

There are times when extraordinary circumstances occur (e.g., serious illness, death in the family, etc.). In such circumstances, and/or if you need additional time to satisfactorily complete any course requirement, please consult with the instructor within a reasonable amount of time.

**Academic Misconduct:** As a student registered at this University, it is expected that you will adhere to only the strictest standards of conduct. Your continued enrollment in this course is an implied contract between you and the instructor on this issue; from this point forward, it is assumed that you will conduct yourself appropriately.

Academic integrity relates to the appropriate use of intellectual property. The syllabus, lecture notes, and all materials presented and/or distributed during this course are protected by copyright law. Students are authorized to take notes in class, but that authorization extends only to making one set of notes for personal (and no other) use. As such, students are not authorized to sell, license, commercially publish, distribute, transmit, display, or record notes in or from class without the express written permission of the instructor.

**Plagiarism:** Plagiarism includes (but is not limited to): A. Directly quoting the words of others without using quotation marks or indented format to identify them. B. Using published or unpublished sources of information without identifying them. C. Paraphrasing material or ideas without identifying the source. D. Unacknowledged use of materials prepared by another person or agency engaged in the selling of term papers or other academic material.
**Attendance Policy:** Federal regulations require attendance be verified prior to distribution of financial aid allotments. Students are expected to attend all classes, whether taking for credit or auditing (Instructor will permit missing 1-2 classes for valid reasons).

**One Final Note:** The contents of this syllabus are as complete and accurate as possible. The instructor reserves the right to make any changes necessary to the syllabus and course material. The instructor will make every effort to inform students of changes as they occur. It is the responsibility of the student to know what changes have been made in order to successfully complete the requirements of the course.
**Student Information (ADV CTM Class):**
