An Innovative Use of Fidget Toys in a University Classroom
Fall 2008 Through Fall 2010
Dr. Donald Slater, P.E., Georgia Southern University

Abstract

The multiplicity of in-class negative distractions detracts contemporary students from the learning process. The researcher initiated the use of fidget toys in the classroom in order to create a positive distraction to help refocus student attention on in-class topics. The fidget toys used in this research were small, squeezable, spongy, hand-held items. A twelve (12) question Likert Rating Scale survey was used to record data both at the beginning and end of each of the semesters. Research survey results suggest that fidget toys were instrumental in refocusing the attention of those students who had previously succumbed to distractions in the learning process.

Modification

The Fidget Toy Survey was originally designed to accommodate both a course in construction management and a course in computer science. Since the collaboration with the co-researcher ended, the researcher has elected to eliminate questions three (3) and four (4) which were specifically aimed at computer use in the classroom.

Images of Fidget Toys Before Use

Presentation, Problem, and Solution

Presentation

Summarizes and analyzes data collected from Fall 2008 through Fall 2010 (i.e., five semesters) from 166 students.

• Demonstrates the value of students’ perspectives, values, and opinions in the use of fidget toys in the classroom.

Problem

• In-class distractions for contemporary students include, but are not limited to, fidgeting, chewing gum, chewing on pencils, nail biting, hair twirling, nose picking, clicking pens, tapping fingers, sleeping, doodling, consuming food and beverages, communicating on cell phones, text messaging, working cross-word puzzles, reading newspapers, working on assignments from other classes, and doing math puzzles.

Solution

• The working hypothesis was that the use of fidget toys would help refocus student attention on in-class topics. The researcher initiated the use of fidget toys in the classroom in order to refocus the attention of those students who succumb to distractions in the learning process. This may be viewed as a modification of behavior from a negative distraction to a positive distraction.

Data Collection, Presentation, and Value

Data Collection

Twelve question Likert Rating Scale (LRS) survey with the following:

1 = Terrible, None, Never
2 = Poor, Low, Seldom
3 = Neutral, Medium, Occasionally
4 = Good, High, Frequently
5 = Excellent, Highest, Always

At the beginning and end of each semester.

Students estimated the value of use of the fidget toys in redirecting their attention in-in-class topic material.

Survey was used in the Site Construction course.

Presentation

Utilizes the LRS to display fidget toy survey data.

Survey questions illustrate the alignment of in-class student focus.

Value

Determining how survey data collected from both the beginning-of-course and the end-of-course assist in identifying strengths, improvements, and insights for course management, design, and teaching processes.

Examples of Student Comments

Good idea

Think they are good for people who need them.

Fidget toys helped me to stay attentive and stay off of my cell phone.

Was nice to have some days.

Helpful

Good for paying attention.

Good tool to stay focused in class.

I usually stayed focused and had low stress.

I found myself more focused while using the fidget toy.

Good for an anxious person like me.

Very good idea

I didn’t use it but I believe that it is very beneficial.

Non

Having them available

Good for an anxious person like me.

Supportive and beneficial to many students.

Nice having them available.

Very useful on days when I was fidgety.

Dr. Donald Slater, P.E., Georgia Southern University

Fidget toys (hats) for the Construction Management course were eliminated.

The cumulative trend from the selected ten (10) questions of the Fidget Toy Survey suggests an increasing acceptance and use of the fidget toys as the semester progressed. The students’ distraction levels from non-course materials decreased. The use of fidget toys helped refocus the attention of those students who succumb to distractions to the learning process and to in-class topics.

Acknowledgements

The Fidget toy (hats) for the Construction Management course were donated for the research by both New South Construction and Kiewit Southern Company.
