Culture Shock

Culture shock emerged in the mid-1950s as a useful concept to help explain the emotional tension, adjustment problems, and difficulties immigrants, refugees, and foreign students face at school and in their personal lives when they are thrust into new environments. In the new setting, interrelations with friends, family members, and the broader community, as well as salient linguistic, cultural, and religious values, cannot be maintained or publicly practiced by these groups, since they often differ from the values and practices of the host society. In schools, culture shock has gained some attention due to the steady rise in the number of immigrants attending U.S. schools and the considerable differences between ethnic groups and mainstream student school performance.
