Cliponera Cuttings

By F. K. McKeen

There are a number of species of Cliponera, but the one generally cultivated is the 'Cliponera Cuttings.' This species is a native of the United States and Canada, and is found in the southern states from Maine to Florida.

The rootstock of the plant is a hardy perennial, growing to a height of 3 to 4 feet. The leaves are dark green, oval in shape, and have a strong, pleasant odor when bruised. The flowers are small, white, and bloom from May to September.

Cuttings can be taken from the mother plant at any time during the growing season. The cuttings should be about 2 to 3 inches long, with at least one node and one leaf. The cuttings are then potted in a mixture of peat moss and sand, and placed in a warm, humid location until roots form, which usually takes about 4 weeks.

Once the cuttings have rooted, they can be planted in the garden. Cliponera prefers full sun or partial shade and well-drained soil. Water the plants regularly, but avoid overwatering as the roots are not very tolerant of excess moisture.

The flowers of Cliponera are fragrant and attract bees and butterflies. They make a great addition to the flower garden and are also useful for cut flower arrangements.
Alcatraz In The Pinewoods Is A Modern Prison

A modern, secure, and efficient penitentiary, Alcatraz is located in the midst of the San Francisco Bay. Its design and architecture reflect the latest innovations in prison construction, ensuring the safety and well-being of its inmates. The facility is surrounded by a moat and guarded by a revolving light and searchlights, providing a sense of isolation and security.

Congressman Says He Will Not Oppose Rivers In 1938 Race

Representative J.E. O'Donnell, D-Cali., has indicated his intention to run for re-election in 1938, despite initial plans to retire. His decision to continue his political career is expected to have a significant impact on the dynamics of the upcoming election.
